

Coalite Regeneration Works

Period Monday 6th March to Sunday 12th March 2017

Main Site Works Undertaken

- 189,600 litres of impacted water collected and removed from site, depressions where water collected levelled out and sheeted over.
- Area of sheeted ground to control odour increased to approximately 15,000 square metres.
- No other significant works undertaken

Monitoring

- A huge amount of monitoring, continuous and intermittent, is undertaken with many environmental properties being measured and reported every 5 seconds. This is done so that if the site works cause an unacceptable impact immediate action can be taken to address the cause.
- As is to be expected given the low scale of the works being undertaken no significant environmental impacts were detected either on site or off site.

Complaints Received

- Two complaints received both about odour, both at weekends when no works were being undertaken.
- Both complaints were investigated and no specific site source was identified as being a potential cause.
