

Coalite Regeneration Works

Period Monday 20th March to Sunday 26th March 2017

Main Site Works Undertaken

- Area of sheeted ground to control odour increased to approx. 17,170 square metres.
- 54,400 litres of impacted water collected and removed from site.
- Site visit by Bolsover Civic Society members and a group of local councillors
- No other significant works

Monitoring

- A huge amount of monitoring, continuous and intermittent, is undertaken with many environmental properties being measured and reported every 5 seconds. This is done so that if the site works cause an unacceptable impact immediate action can be taken to address the cause.
- As is to be expected given the low scale of the works being undertaken no significant environmental impacts were detected either on site or off site.

Complaints Received

- One complaint received about odour just after site works of lifting water and filling depressions filled. No elevated levels noted on site.
