

## Coalite Regeneration Works

Period Monday 27<sup>th</sup> March to Sunday 02<sup>nd</sup> April 2017

---

### Main Site Works Undertaken

- Area of sheeted ground to control odour increased to approx. 18,170 square metres.
- 78,000 litres of impacted water collected and removed from site.
- No other significant works

### Monitoring

- A huge amount of monitoring, continuous and intermittent, is undertaken with many environmental properties being measured and reported every 5 seconds. This is done so that if the site works cause an unacceptable impact immediate action can be taken to address the cause.
- As is to be expected given the low scale of the works being undertaken no significant environmental impacts were detected either on site or off site.

### Complaints Received

- Two complaints received on Friday for the previous day in the early evening, in separate areas and describing the odour differently. No works in the previous afternoon identified as a potential source.
