

Coalite Regeneration Works

Period Monday 03rd April to Sunday 09th April 2017

Main Site Works Undertaken

- Area of sheeted ground to control odour increased to approx. 20,170 square metres.
- 52,000 litres of impacted water collected and removed from site.
- Project board erected facing Buttermilk Lane by the site entrance
- No other significant works

Monitoring

- A huge amount of monitoring, continuous and intermittent, is undertaken with many environmental properties being measured and reported every 5 seconds. This is done so that if the site works cause an unacceptable impact immediate action can be taken to address the cause.
- As is to be expected given the low scale of the works being undertaken no significant environmental impacts were detected either on site or off site.

Complaints Received

- No complaints received this week.
